

E&C Group GmbH components are perfectly used for handling and ensiling unpacked and heaped products.

The range of E&C Group products represents a wealth of experience developed and acquired in many years of cooperation between engineers, plant engineers, mechanical designers and expert installers, who have created the best component for each type of industry and application.

E&C Group components are unique. They are based on the assumption that the machine must be perfectly fit for each sector, plant and product.

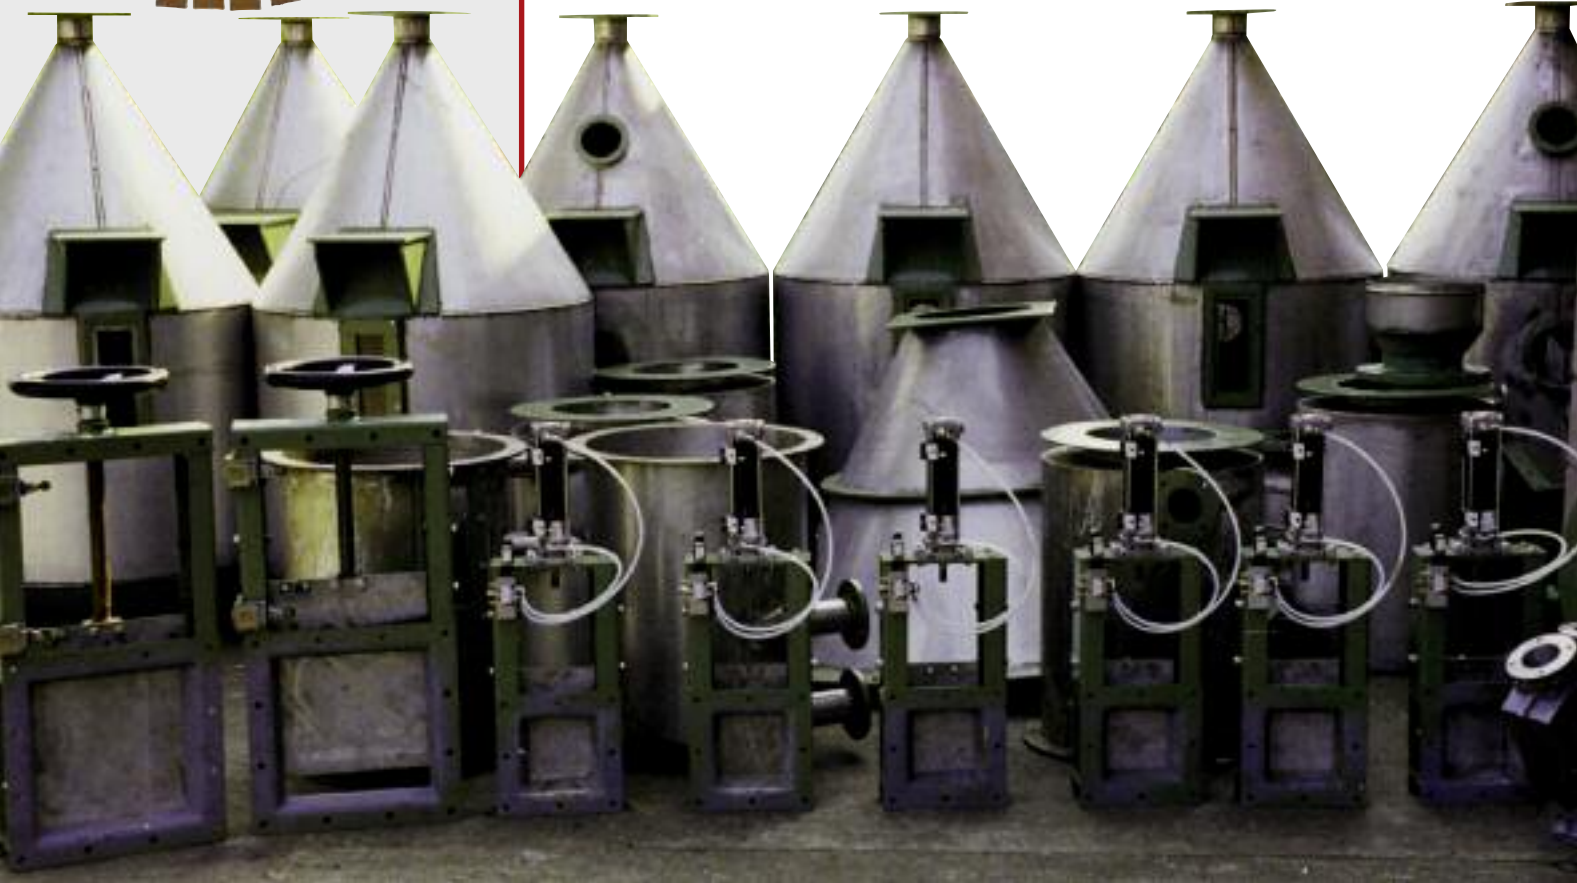

We engineer and manufacture standard and special components, most suitable for your requirements and needs.

Our company is operating in various industries: cement, lime, plastic, glass, in stainless steel, metallurgic, ceramic, pharmaceutical, food sectors, etc.

The features of components are listed in a technical manual, along with technical data sheets for easy reference.

Some of our components are listed here below:

- Vibrating feeders
- Double-helix activators
- Diverting devices
- Antiabrasive elbows
- Diverter
- Loading bellows
- Bag openers
- Rod gates
- Slide gates
- Double dump valves
- Rotary and butterfly valves
- Lump breakers
- Fluidised channel conveyors
